Week 18

Introduction to Programming and Numerical Analysis

Ebener, Luca

UNIVERSITY OF COPENHAGEN

Overview

- Work on the model project

Model project

- I will have to tell the administration whether you are eligible for the exam soon after the deadline on the 12th of May. Therefore, there are no resubmissions this time.

- You do not have to make a model from scratch, but you are going to have to be a bit creative. Take a look at last year's projects for some guidance on how to tackle the model project.

- If your model is already very complex, your extension does not have to be revolutionising. It will typically be easy to re-solve the model with a different production or utility function.

- Motivation: The assignments are part of your exam portfolio. If you already have two great projects, they might compensate for a disappointing exam project.
